SUPERDISC

AERATED

Yet another innovation from Sandmaster, the world's largest manufacturer of foam based abrasives, the patented Sandmaster Superdisc. The Superdisc is perforated across its entire surface. This means the sanding dust produced is removed across its entire surface, resulting in virtually dust-free sanding.

The hook and loop backing on its reverse is designed to allow the sanding dust to be removed between the machine's backing plate and the sanding disc. This significantly reduces the amount of dust that can escape into the workplace, resulting in a cleaner and healthier work environment.

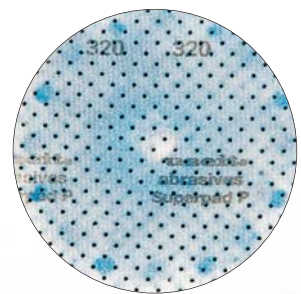

The 3mm foam Sandmaster Superdisc's design provides a better cut than conventional paper abrasives, resulting in better quality, efficiency and productivity.

The Superdisc is flexible and more tear resistant.

The Sandmaster Superdisc's patented design prevents clogging which maintains optimum contact with the surface being sanded. This results in up to four times more sanding capacity than conventional sanding products.

The Superdisc, therefore, means faster sanding, shorter downtime to change discs and, more importantly, consistent quality.

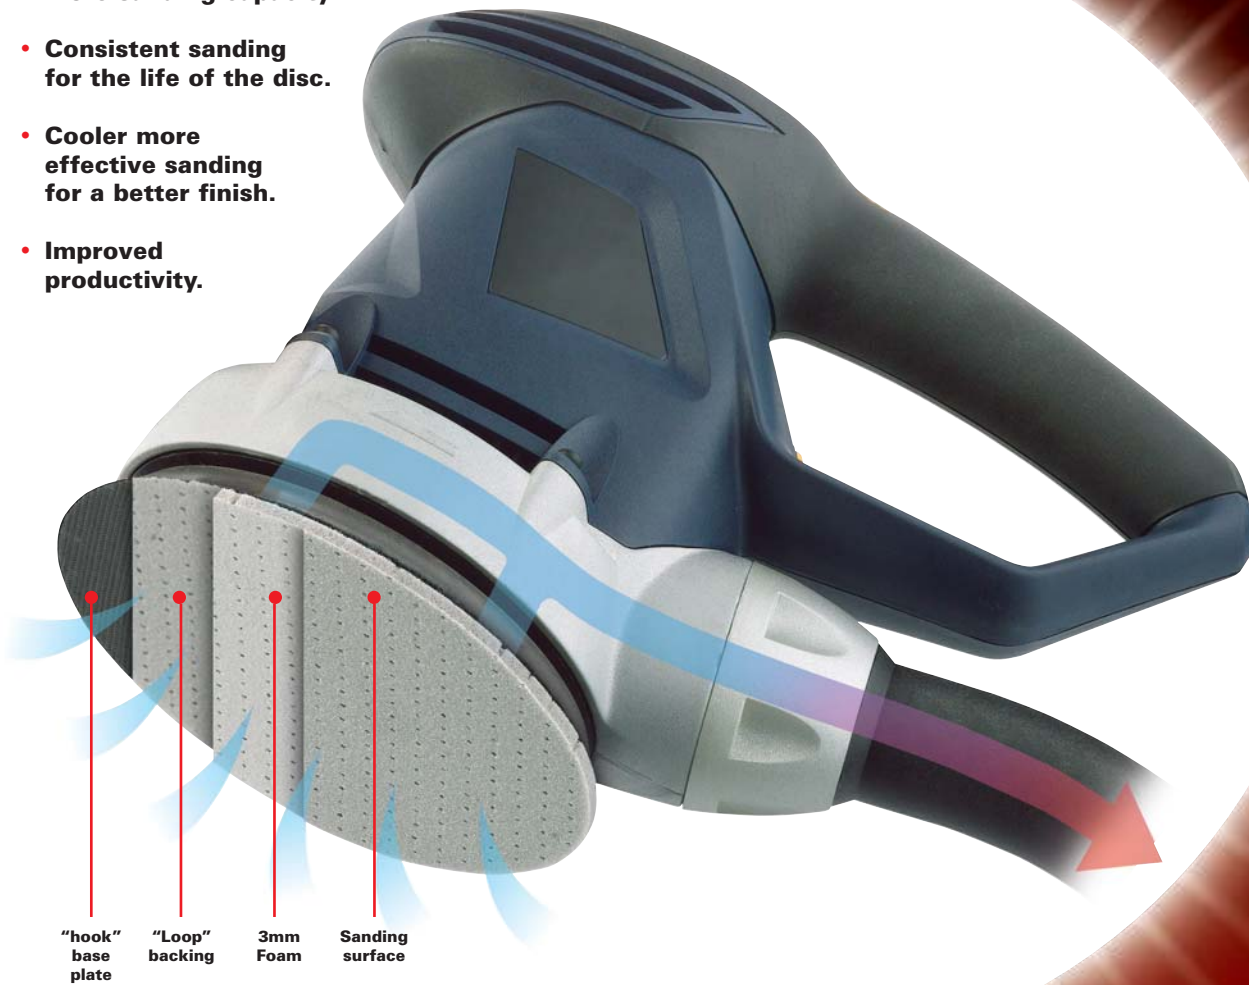

The Sandmaster Superdisc fits all manual sanders, with or without suction. Its unique design features combine to save time and money while providing a better finish and more efficient working.

Sandmaster Superdisc
Patented hook and loop backing allows permanent, clean extraction on the rear side.

ABRASION

- The Sandmaster Superdisc 3mm foam gives a better cut than paper abrasives.
- Patented design combining perforations and hook and loop fastener means virtually dust-free extraction for a cleaner and healthier workplace.
- Prevents clogging for better sanding results.
- Superdiscs have up to 4 times more sanding capacity.
- Consistent sanding for the life of the disc.
- Cooler more effective sanding for a better finish.
- Improved productivity.

surface

Sandmaster Superdisc

Suction removal across the entire surface reduces clogging and allows efficient dust extraction.

Standard disc

Clogged disc has greatly reduced sanding capacity and more dust escapes extraction.

ABRASION INNOVATION

INVESTING IN THE FUTURE

- Sandmaster is the world's largest manufacturer of foam based abrasives with over 99% exported.
- Production facility increased to 20,000 sq.m. (over 250,000 sq.ft.) in March 2005.
- Sandmaster design and build their own specialist production equipment.
- Innovation, quality and commitment combine to make sandmaster the Number One manufacturer of foam based abrasives.
- Sandmaster control their entire manufacturing process.
- Block mould their own specially formulated foam.
- Apply specialist adhesives and abrasives.

SUPERDISC

Sandmaster Superdisc	Abrasive Grade					
150mm Diameter Discs	60	120	220	400	600	
95mm x 90mm Triangle	60	120	220	400	600
